Make Life Memorable

CATALOGUE

2025

www.lopo-tech.com

WHY WE DESIGN OUR CATALOG LIKE THIS?

Dear customers. I am the designer of Lopo--Daisy. In 2025, Lopo wants to give you a new impression like our catalog design. Our design is based on CMYK color, but it is innovative. It is lively and dynamic with the colorful wave of Lopo's vision, mission, and value. Full of color gives others hope and flexibility, unlike the unchanging impression of the printing industry.

We also do something innovative. Our catalog does some breakthrough design on the inside pages. You can refer to the product categories and scan its QR code for all information like photos, videos, prices, etc. We will keep the catalog and website in the same classification. When you read our catalog, you will know our features of products and the lists of products at the same time.

Why we do these changes to catalog design? I think the most important idea is "Less Paper, More Green". We aim to promote environmentally friendly in our daily use and we find that our old catalog used too many pages. So, we only keep the key information about different materials and perfectly cooperate with our websites. Another point is that the new design will bring you convenience when you want to browse our website anywhere at any time. There is no need to spend a long time flipping pages to find the items you need. What worries you is always what we care about!

In the end, we provide a lot of useful tools for you like templates, videos, photos, etc. If you want to know how to get our materials, you can watch our design-sharing videos through the QR code below. Hope my videos are helpful for you!

Scan for Designer's Video

HOW TO READ OUR CATALOG?

1 Find the catagory of sublimation you need

2 Scan the QR code of every catagory

3 Read the info. of products on the website

4 Submit your email in the form on the pages and we will contact you as soon as possible

WEARBLE BLANKS

A New Frontier in 2025

2025 marks the introduction of our Wearable Blanks category, a significant step forward in expanding the possibilities of personalization. Recognizing the limited options currently available in this segment, we see immense potential for growth and innovation, driven by advanced printing technologies like Direct to Film (DTF) and UV Direct to Film (UV-DTF).

Our vision is to work closely with our customers to develop a diverse range of practical and stylish wearable blanks. Together, we aim to explore the opportunities this exciting category presents, creating products that not only fulfill consumer needs but also elevate daily life with personalization and creativity.

We look forward to partnering with you in this inspiring journey throughout 2025 and beyond.

LINEN

Introduced to the sublimation market in 2015, linen material has undergone various updates, evolving into the premier choice in sublimation textiles. Renowned for its vibrant and consistent printing quality, this fabric has garnered praise for its environmentally friendly and eco-conscious appeal. With its stylish, soft, and durable feel, linen has become a top choice for sublimation printing.

1st Generation (2015-2016)

Without backing liners, the prints got sticky and needed a quick separation after printing.
Plus, there was a bit of a problem with pilling.

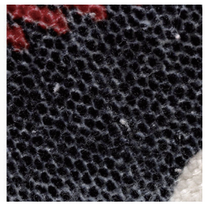

2nd Generation (2016-2017)

By using backing liners to prevent stickiness and increasing the thickness, the finished products now with a sturdier appearance. Despite these improvements, the material was still proned to pilling.

3rd Generation (2017-2023)

The fabric's resistance to pilling has been upgraded with a new raw material developed using an improved formula, ensuring it remains soft at **460 GSM.**
Plus, there are more color options available now, providing greater possibilities for customization.

4th Generation (2024)

With the latest formula and upgraded raw materials, the fabric not only **stays free from pilling** while retaining its soft feel but is also now **waterproof.** This enhancement not only prevents pilling but also contributes to vibrant printing and various other features.

Soft Surface Blanks

Sublimation Textile is the second-largest category except for Ceramic products in the sublimation industry, Lopo noticed this in 2016 and then paid a lot of attention to the research of the material for sublimation textile, luckily, we found it in the field that we can manage to get in and do it better. So we started focusing on developing new sublimation textile materials in late 2016 and we managed to develop sub-linen, sub-sequin, soft-linen, colorful -linen, and there are more new materials are under development.
Finally, the sewing line was open in earlier in 2019, we were so lucky that we have found the professional manager and workers to join us, most of them are being in the sewing industry for their entire life, they work hard but never complain, they are professional but they never thought they are somebody, they love what they do and always try their best. So now, from two years of growing, I am proud to say that we should be the most professional supplier of sublimation textile products among all the Chinese suppliers and we keep moving.....

Linen brought lots of possibilities into sublimation industry for the past few years, it made sublimation be with a higher end finished products and it is still keep growing.

POLY PU

Poly PU Material Innovation by Lopo

Since 2017, Lopo has pioneered the development of Poly PU, a versatile material available in two types:

1. Coated PU Leather

A premium PU material featuring a polyester coating with heat-resistant properties, ideal for sublimation printing.

Available in white, this high-quality material has been used to create a full range of products, including leather phone cases, wallets, card holders, and more.

2. Fabric with PU Leather Feel

A cost-effective alternative that combines the luxurious hand feeling of PU leather with heat-resistant capabilities.

Available in white, green, and beige, this material has gained significant popularity for its exceptional printing results, premium hand feel, and superior finished quality.

It serves as notebook ,pillow cases etc.

Customization and Collaboration

We welcome suggestions and ideas from our users for new product development using these innovative materials. Additionally, we offer these materials in roll to meet specific project requirements.

These full sereise of materials can be work with both sublimation and DTF Transfer printing for personalization.

BURLAP

Eco-Friendly and Natural Material Series

In response to the growing trend toward natural, non-white substrates in the personalized products industry, we are proud to introduce our Burlap material series. This eco-friendly and cost-effective material is designed to meet the demand for earthy, nature-inspired aesthetics.

Scan for Products

Product Applications

Home Décor:
Our Burlap coasters and storage trays are unique and highly popular, adding a touch of rustic charm to any space.

Everyday Essentials:
Burlap shopping bags and drawstring pouches are versatile, practical, and widely used in daily life.

Printing Compatibility

Burlap is compatible with both sublimation and DTF transfer printing, ensuring vibrant and durable designs that serve to a wide range of creative applications.

Customization Opportunities

We welcome new product development requests based on this material. Additionally, Burlap fabric is available in rolls to support your custom projects.

NEOPRENE

A Legacy of Quality and Innovation

Neoprene has been a well -known series of materials of the sublimation industry for decades, renowned for its versatility and durability. It is widely used in popular products such as mouse pads, can coolers, and more.

Scan for Products

How to clarify the quality difference

Thickness:

Neoprene is available in various thicknesses to suit different product requirements.

While thicker materials may cost more, selecting the right thickness for your specific application is crucial for optimal performance.

LOPO's expertise ensures you choose the perfect material to meet your needs.

Fabric Density:

The density of the white fabric used for printing significantly impacts the final product quality.

Higher-density fabrics deliver superior printing results, making them a worthwhile investment for premium finishes.

Expanded Color Options

Over the years, Neoprene has evolved beyond traditional white to include a vibrant range of colors, such as neon colors, offering even more creative possibilities for personalized products.

Innovation at LOPO

At LOPO, we value innovation and welcome new ideas. Whether you're developing a new product or exploring creative applications for Neoprene, we are here to support your vision.

SUBLICOTTON

Personalized Blankets and Towels: A Growing Market with Endless Potential

The personalized blankets and towels market is experiencing significant growth, driven by increasing consumer demand for custom products that add a unique touch to their daily lives. While entering this market requires substantial investment in equipment, such as large-format printers and heat presses, the rising trend of personalization makes it a highly lucrative and promising industry. At Lopo, we are not only committed to material innovation but also equipped with our own automatic sewing line, ensuring that our products meet the highest standards of quality while remaining competitively priced.

Materials Developed for Blankets and Towels Series

Sublicotton Material

Applications: Widely used for tea towels, golf towels, and beach blankets.

Features:

- 95% polyester base with a cotton-like feel for enhanced comfort.
- Flat surface for easy cleaning and maintenance.
- Exceptional printing quality with vibrant, long-lasting colors.

Sherpa Material

Applications: Ideal for facial towels, beach towels, bath towels, and blankets.

Features:

- Ultra-soft texture on the Sherpa side, providing a luxurious, wool-like feel that is gentle on the skin.
- Lightweight yet highly insulating, offering warmth without bulk.
- Durable and machine-washable for long-lasting use.
- Vibrant printing quality, with one side made of cotton for skin-friendly comfort and the other side polyester for excellent water absorption.

SUBLICOTTON

Flannel Material

Applications: Perfect for a variety of blankets, especially during colder seasons.

Features:

- Cost-effective solution without compromising on quality.
- Vibrant printing quality for eye-catching designs.
- Excellent warmth retention, making it ideal for winter use.

Knitting Materials

Applications: Suitable for indoor and outdoor blankets, as well as daily dressing.

Features:

- Premium and luxurious feel, catering to high-end markets.
- Vibrant printing quality for stunning visual appeal.

Why Choose Lopo?

At Lopo, we combine material innovation with advanced manufacturing capabilities to deliver personalized blankets and towels that meet the evolving needs of the market. Our focus on quality, affordability, and versatility ensures that our products stand out in a competitive industry.

Whether you are looking for cost-effective solutions or premium materials, Lopo is your trusted partner in the personalized textiles market. Explore our range of materials and let us help you create products that resonate with your customers.

For more information or to discuss custom solutions, feel free to contact us. Together, we can unlock the full potential of the personalized blankets and towels market!

DRINKWARE

A Core Category in the Personalized Industry

Drinkware is one of the **most competitive, versatile, and essential** categories in the personalized industry. It has evolved significantly, expanding from traditional ceramic options to aluminum, stainless steel, and a variety of other materials commonly found in the market today.

The key to selecting the right products in this category lies in understanding the equipment you use for printing. Whether you work with a mug press, oven, UV flatbed printer, UV-DTF printer, or other machines, the compatibility of blanks with your equipment is crucial.

At LOPO, we strive to provide drinkware that is compatible with the widest range of equipment available in the market. Additionally, we are committed to innovating and developing equipment to meet the ever-changing demands of the industry.

ALUMINUM BLANKS

A Must-Have Category in Sublimation Blanks

Aluminum stands as one of the most popular categories in the sublimation blanks industry, thanks to its ease of printing and versatility. This material is used in a wide range of products, including aluminum inserts blanks :eg sublimation phone cases, metal tins, keychains, photo panels and more.

With advancements in coating technologies and production facilities, aluminum sheets manufactured in China now offer an excellent balance of quality and affordability. These improvements make aluminum an essential choice for businesses in the personalized industry.

If you're looking to expand your product range, aluminum is a must-have category to elevate your personalized business!

Aluminum Blanks

GLASS BLANKS

A Vibrant Choice in Sublimation Blanks

Glass has been in the sublimation industry for over 20 years. Starting with glass beer mugs, the category has expanded to include glass photo panels, cutting boards, crystals, and more. Widely used in home décor, photo panels, and drinkware, glass is a favorite for its vibrant colors and cost-effectiveness.

Achieving even coating and consistent color is critical to producing high-quality sublimation-coated glass products. Due to the nature of glass as a raw material is with color variations and production of coating can be influenced by temperature. However, with over a decade of experience, LOPO has mastered the techniques needed to ensure stable quality and reliable results.

The Glass Series is a versatile and vibrant choice for your personalized business, offering both affordability and impact.

CERAMIC BLANKS

The Foundation of Sublimation Blanks

Ceramic mugs were the first products manufactured in China for sublimation over 40 years ago. Today, ceramic blanks have evolved far beyond mugs to include tiles, ornaments, coasters, and more, making ceramics one of the most essential categories in the personalized industry.

Widely used in our daily life, ceramic products are valued for their superior quality and ease of printing. For these reasons, almost every personalized business includes multiple types of ceramic products in their offerings.

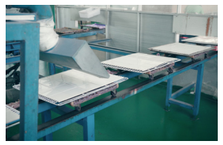

The supply chain for ceramics is highly stable, but there is still significant potential for innovation. At LOPO, we remain committed to developing the right products based on ceramic materials to meet evolving market demands.

PHOTO PANELS

The Ideal Printing Technology for Personalized Photo Printing Businesses

Sublimation is a highly effective printing technology, particularly well-suited for small and medium-sized personalized photo printing businesses. Here's why:

1.Vibrant, Long-Lasting Colors

Sublimation produces vivid, vibrant colors that are durable and can last for years, ensuring high-quality, long-lasting prints.

2.Affordable Start-Up Investment

With an initial investment of less than $2,000, you can launch your business. A hobby heat press, A4 printer, sublimation ink, paper, and a selection of blanks are all you need to get started.

3.Extensive Range of Products

Sublimation is compatible with a wide variety of products, including aluminum photo panels, photo slates, glass photo panels, MDF, and much more.

The potential for further development and innovation within sublimation photo panel is vast, and we are excited to support your growth in this dynamic industry.

Photo Panels

MDF BLANKS

A Trusted Material in Sublimation for Over 30 Years

MDF has been in the sublimation industry for more than **30 years**, with production in China officially started in 2011. With over **14 years** of experience, LOPO is one of the few manufacturers producing this material for sublimation. While the density of MDF in China differs from that of US-made products (such as Unisub), we focus on producing smaller format blanks, including coasters, ornaments, keychains, and thicker blanks for photo panels, typically **exceeding 9mm in thickness**.

Our MDF products are made with careful attention to detail. Unlike many others, we do not use a protective film; instead, we remove the protective layer during production in our factory. This not only provides added convenience for our customers but also allows us to conduct a thorough 100% quality control check. As a result, we can confidently guarantee that the defective rate is **less than 1%.**

FLEXI SERIES

A Breakthrough in Sublimation Technology

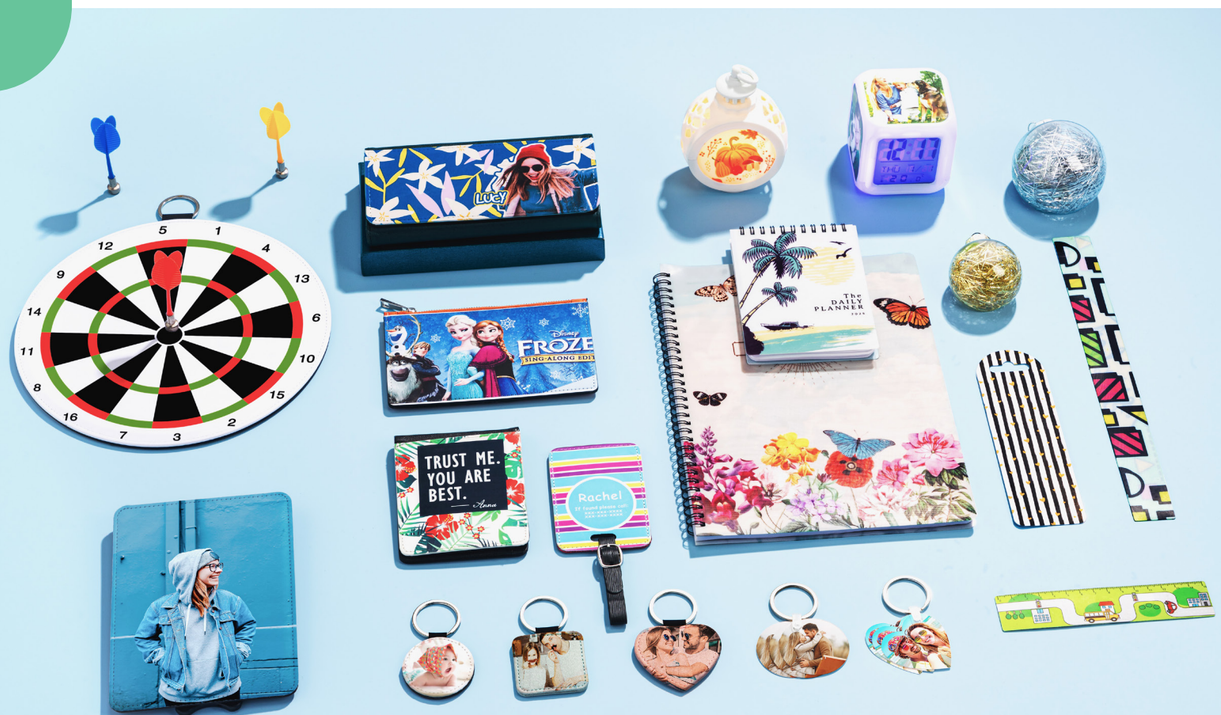

The Flexi Series was developed by LOPO in 2017 with the goal of creating a material that could support sublimation on phone cases while also being compatible with wireless chargers. Sublimation phone cases have always been a key product category for LOPO, and with the growing popularity of wireless charging, it became essential to design a material that could meet both requirements.

We were fortunate to successfully develop our Flexi PET Series, which quickly gained popularity due to its compatibility with both **sublimation printing and wireless chargers.**

Today, the Flexi Series has expanded beyond phone cases to include a diverse range of products. Renowned for its ease of printing, **competitive pricing**, and **high quality,** the Flexi Series continues to be a popular choice for businesses in the personalized products industry.
